Here's our grid for the Super Bowl XLIV Candy Pool. Names were placed randomly on the grid and then numbers were randomly drawn. We filled the grid up as we received your names and we have 59 participants. As we had said, those who were prompt would receive an extra square and the first 41 respondents were rewarded.

Every score change is worth a candy bar, so we want a high scoring game. Also, the person who starts the game with 0-0 wins a candy bar, and whoever has the score at the end of each quarter also win. For example, if Indianapolis scores first, say a field goal, the score would be 3-0 Indianapolis. The person who has the square representing 3 for Indianapolis and 0 for New Orleans (that happens to be Bart) wins a candy bar. Then suppose New Orleans scores a touchdown, making the score 6 New Orleans, 3 Indianapolis: the person who has that score (in this example, Alex Spiro) wins. Then New Orleans kicks the extra point, so then the person that has the score 7-3 for New Orleans (Bennett) would win. If the first quarter then ends, Bennett would win again for having the "end of quarter" score. Please note that the digit used is always the last number. So when the score becomes 10 – 14, the numbers zero and four are used.

Congrats to *Abby Spiro*, the lucky player who randomly ended up with 0-0. You win a candy bar. **Good luck everyone!**
